

Expert Guidance for Workplace Risk Assessment

RiskSafe, Dyadem's leading Job Safety Analysis software, assists in performing thorough studies and identifying workplace safety hazards, producing and tracking recommendations, and sharing the information with key stakeholders. By creating safe work environments, companies can avoid potential litigation, costly insurance and workers' compensation claims.

Challenges of Safety Studies

Industries ranging from manufacturing, health care, mining and transportation to agriculture, construction and public services comply with occupational health and safety regulations. In addition to implementing safety controls, trainings, drills and procedures, companies perform job safety and hazards analyses to identify potential accidents and prevent them from occurring in the first place. Using first generation software such as spreadsheets and word processors can inundate an organization with cumbersome documentation, resulting in wasted efforts due to duplication of work, lost data and miscommunications.

An End-to-End Solution

Companies are using dedicated applications for their job safety and hazards analyses in order to be effective and comply with stringent safety regulations and standards. Dyadem's innovative RiskSafe™ software, currently in Version 8, offers a user-friendly, reliable, flexible, and knowledge-based solution.

RiskSafe, a proven technology used world-wide, assists organizations with the implementation of risk assessment studies and has evolved to meet health and safety regulations all over the globe.

With preformatted industry standard JSA templates and libraries, and an intuitive interface, RiskSafe can help organizations focus on creating a safer workplace, while still improving the bottom line by optimizing work time, minimizing work stoppages, and reducing what potential there may be for undesirable litigation.

Knowledge Base - Achieve More Rigorous Studies

RiskSafe comes equipped with comprehensive professional libraries to make your studies more complete and past studies are easily accessible to retain valuable corporate knowledge (including past incidents), and help build corporate libraries. In addition, RiskSafe enables organizations to seamlessly manage different types of JSA studies from a centralized location ensuring consistency between departments and facilities.

Adaptable and User-Friendly

The open structure of RiskSafe allows companies to configure templates according to specific guidelines and organizational needs, ensuring consistency of the studies. The software's user-friendly interface and intuitive functionality provide a logical sequence of steps to complete your hazard assessment studies, allowing your

New Features in Version 8:

- **Dependency Matrix** – helps to create matrix sheets that expand your capabilities to include new types of risk assessment techniques.
- **Conditional Data Mirroring** – allows automatic mirroring of data across sheets eliminating the need for you to repeat data entry in multiple worksheets.
- **Structure List** – create ad hoc breakdown structures via indentation in the rows.
- **Formula Functions** – new formula functions have been added to allow you to manipulate strings in text fields.
- **Tools** – 'macro' like feature automates your tasks, simplifies your work, and increases productivity.
- **New Languages** – now supports Portuguese and Korean in addition to previous availability in English, French, German, Japanese, Simplified Chinese and Spanish.
